

Employee productivity has become a business buzzword in recent times due to compelling evidences indicating a direct relation of an employee's productivity to the company's bottom line. Enterprises are striving to create applications that could simplify processes, boost productivity among their employees, and help drive increased revenue and business growth.

As per a recent study, 90% employees have their productivity and morale killed due to repetitive and boring non-automated tasks. As boring as these tasks may be, they are also integral in the functioning of an enterprise. How can an enterprise negate the effects of repetitive manual tasks?

AI-Powered Digital Transformation of Applications

Nitovate, through its application portfolio, provides a simplified, personalized and personified experience for each employee to manage their manual and redundant tasks in an efficient manner. It is a set of smart and intelligent AI-powered applications, which work on augmented employee engagement, while focusing on reducing efforts and increasing transparency.
